-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 28 November 2001.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claim1-8, 13-16, drawn to a contribution process device and a program storage medium to execute a program for creating contribution data and transmitting the same via a network , classified in class 705, subclass 40.
 - II. Claims 24-25, drawn to a contribution process device and a method for creating contribution data and transmitting the same via a network and also for adding the contribution data to user information who provides content , classified in class 705, subclass 40.
 - III. Claims 9-12 and 17-18, drawn to a contribution accepting device and a program storage medium to execute a program for receiving contribution and charging said user for amount equivalent to contribution data, classified in class 705, subclass 40.
 - IV. Claims 26-28, drawn to a contribution accepting device, a method and a program storage medium to execute a program for receiving contribution, charging said user for amount equivalent to contribution data, adding an amount equivalent to the contribution data to user's information who supplies the content and for charging a service charge for supplying said content to said user information , classified in class 705, subclass 40.
 - V. Claims 19-23, drawn to a contribution processing system comprising a content providing device and a contribution processing device , classified in class 705, subclass 26.

- VI. Claim 29, drawn to a contribution processing system comprising a content providing device, a contribution processing device and a charge processing means for adding an amount equivalent to the contribution data to user's information who supplies the content and for charging a service charge for supplying said content to said user information , classified in class 705, subclass 26.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as *"adding the contribution data to user information who provides content "*. See MPEP § 806.05(d).
3. Inventions IV and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention IV has separate utility such as *"adding an amount equivalent to the contribution data to user's information who supplies the content and for charging a service charge for supplying said content to said user information "*. See MPEP § 806.05(d).
4. Inventions VI and V are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention VI has separate utility such as *"a charge processing means for adding an amount equivalent to the contribution data to user's information who supplies the content and for charging a service charge for supplying said content to said user information "*. See MPEP § 806.05(d).

5. Inventions III and I are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as “ *a contribution accepting device and a program storage medium to execute a program for receiving contribution and charging said user for amount equivalent to contribution data* “. See MPEP § 806.05(d).

6. Inventions V and I are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention V has separate utility such as “ *a content providing device and a contribution processing device* “. See MPEP § 806.05(d).

7. Because these inventions are distinct for the reasons given above and the search required for one Group is not required for another Group, restriction for examination purposes as indicated is proper.

8. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

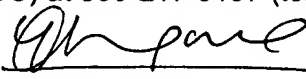

9. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
